

FOREIGN MATERIAL CATCHER

Eliminates Manhole Invert Cleaning

The Foreign Material Catcher (FMC) is the safest, most cost efficient tool designed to be used by one person when working on manholes. The patented, lightweight and sturdy design allows you to work on a manhole and not have dirt, asphalt and cement get in the manhole invert. Expensive OSHA required confined space entry equipment is no longer necessary because the need to enter a manhole for cleaning is eliminated. FMC will not only improve job site efficiency but it will also increase worker safety and enhance employee morale. With only a modest investment, contractors and municipalities will save time and money by utilizing a FMC on their manhole projects.

Sealing Systems, Inc.
